

Digital Geometry -Introduction

Junjie Cao @ DLUT

Spring 2019

<http://jjcao.github.io/DigitalGeometry/>

Pleasure may come from illusion, but happiness can come only of reality.

Contents

- [Motivations](#)
- What is DGP
- Pipeline
- About the course

What is Computer Graphics?

- CG studies **visual/geometric** information using **computer & *mathematics***.
- 3D graphics programming in 1979

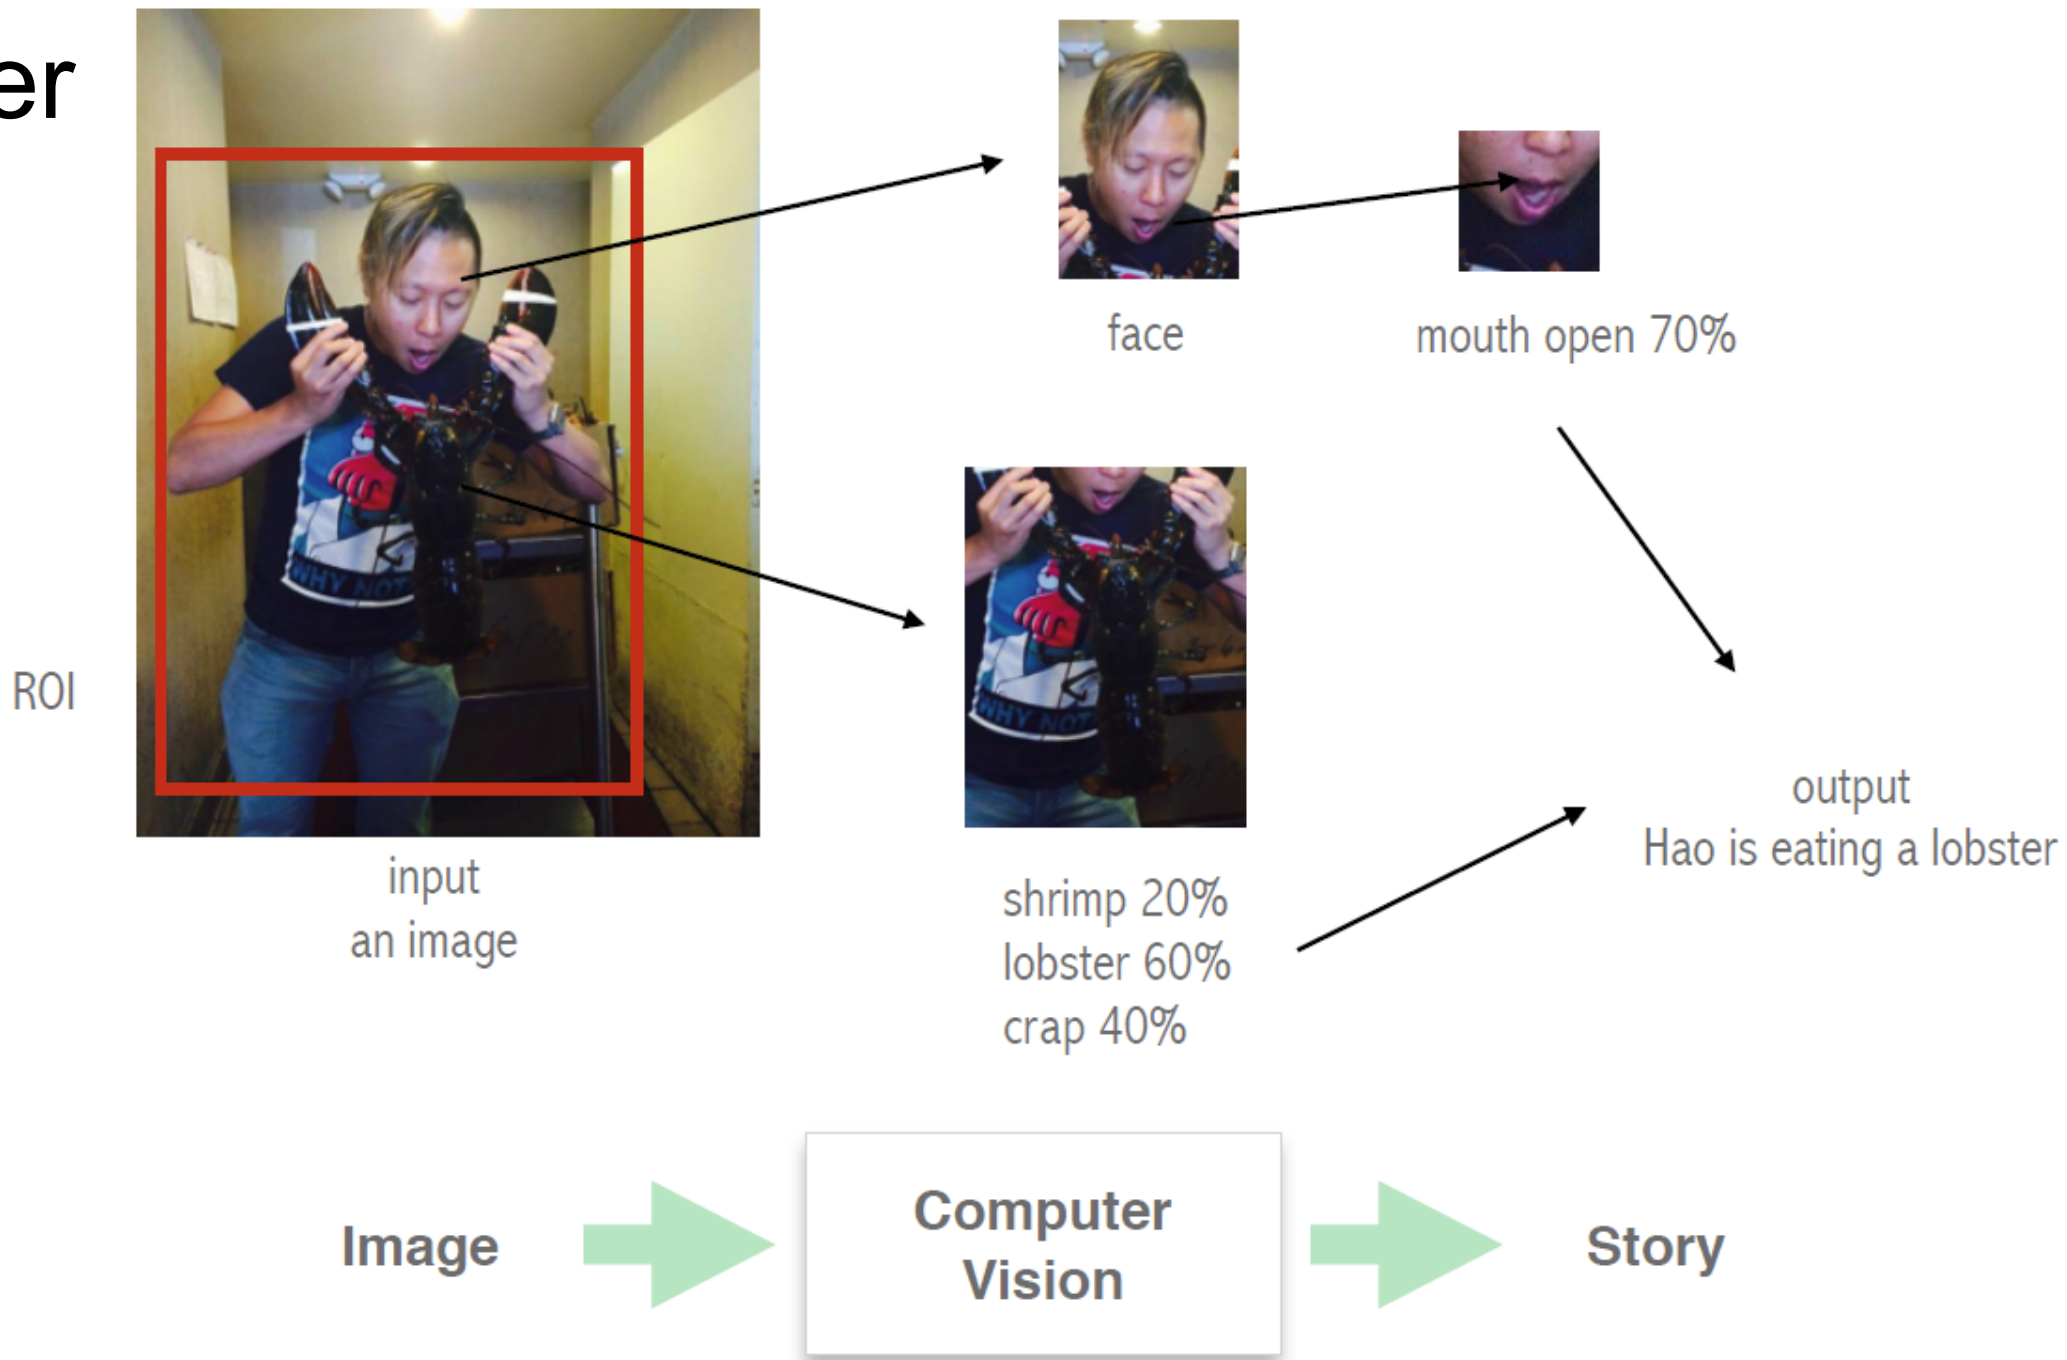

approx. 25 triangles

approx. 50 x 100 pixels

Computer Vision

Computer Graphics

Action!

Story

Computer
Graphics

Image

What is computer graphics?

- The use of computers to synthesize and manipulate **visual information.**
- The use of computers to synthesize and manipulate **sensory information.**

(sound)

(touch)

SIGGRAPH & SIGGRAPH Asia

- Main computer graphics event
- Twice a year
- up to 30K attendees
- Academia, industry, artists

ACM**SIGGRAPH**

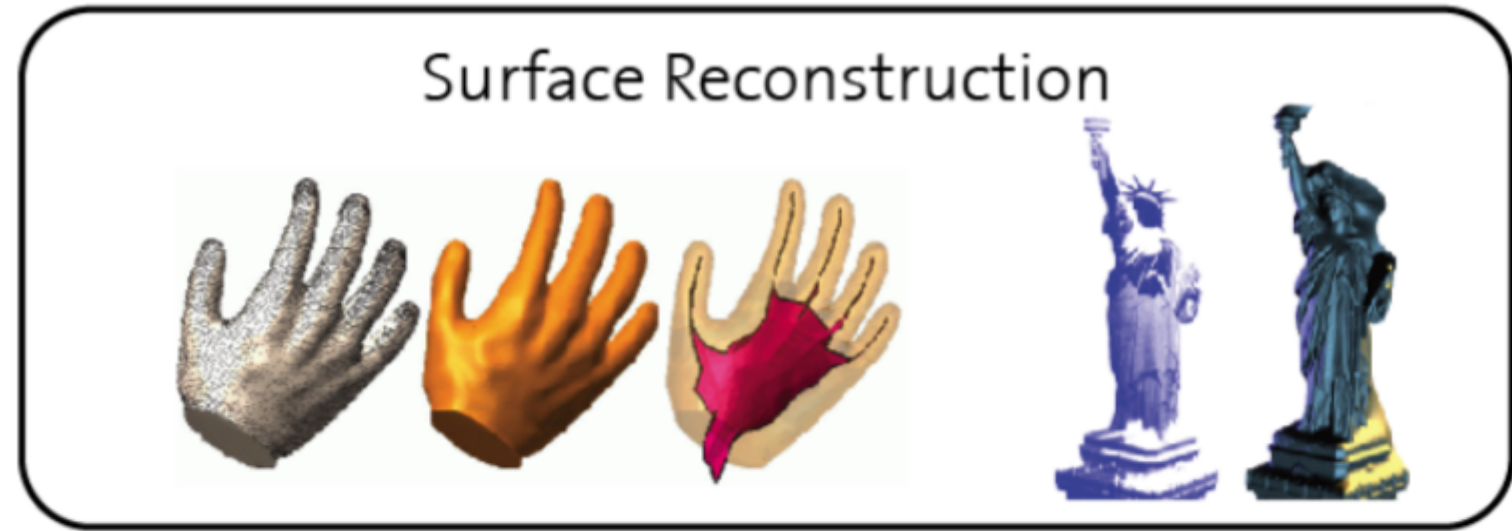

CG & Digital Geometry Processing

- DGP is advanced CG without some traditional parts, like rendering, etc

Geometry Processing Pipeline

Geometry Processing Pipeline

Basic Geometric Analysis

Advanced Geometric Analysis

Discrete Differential Geometry

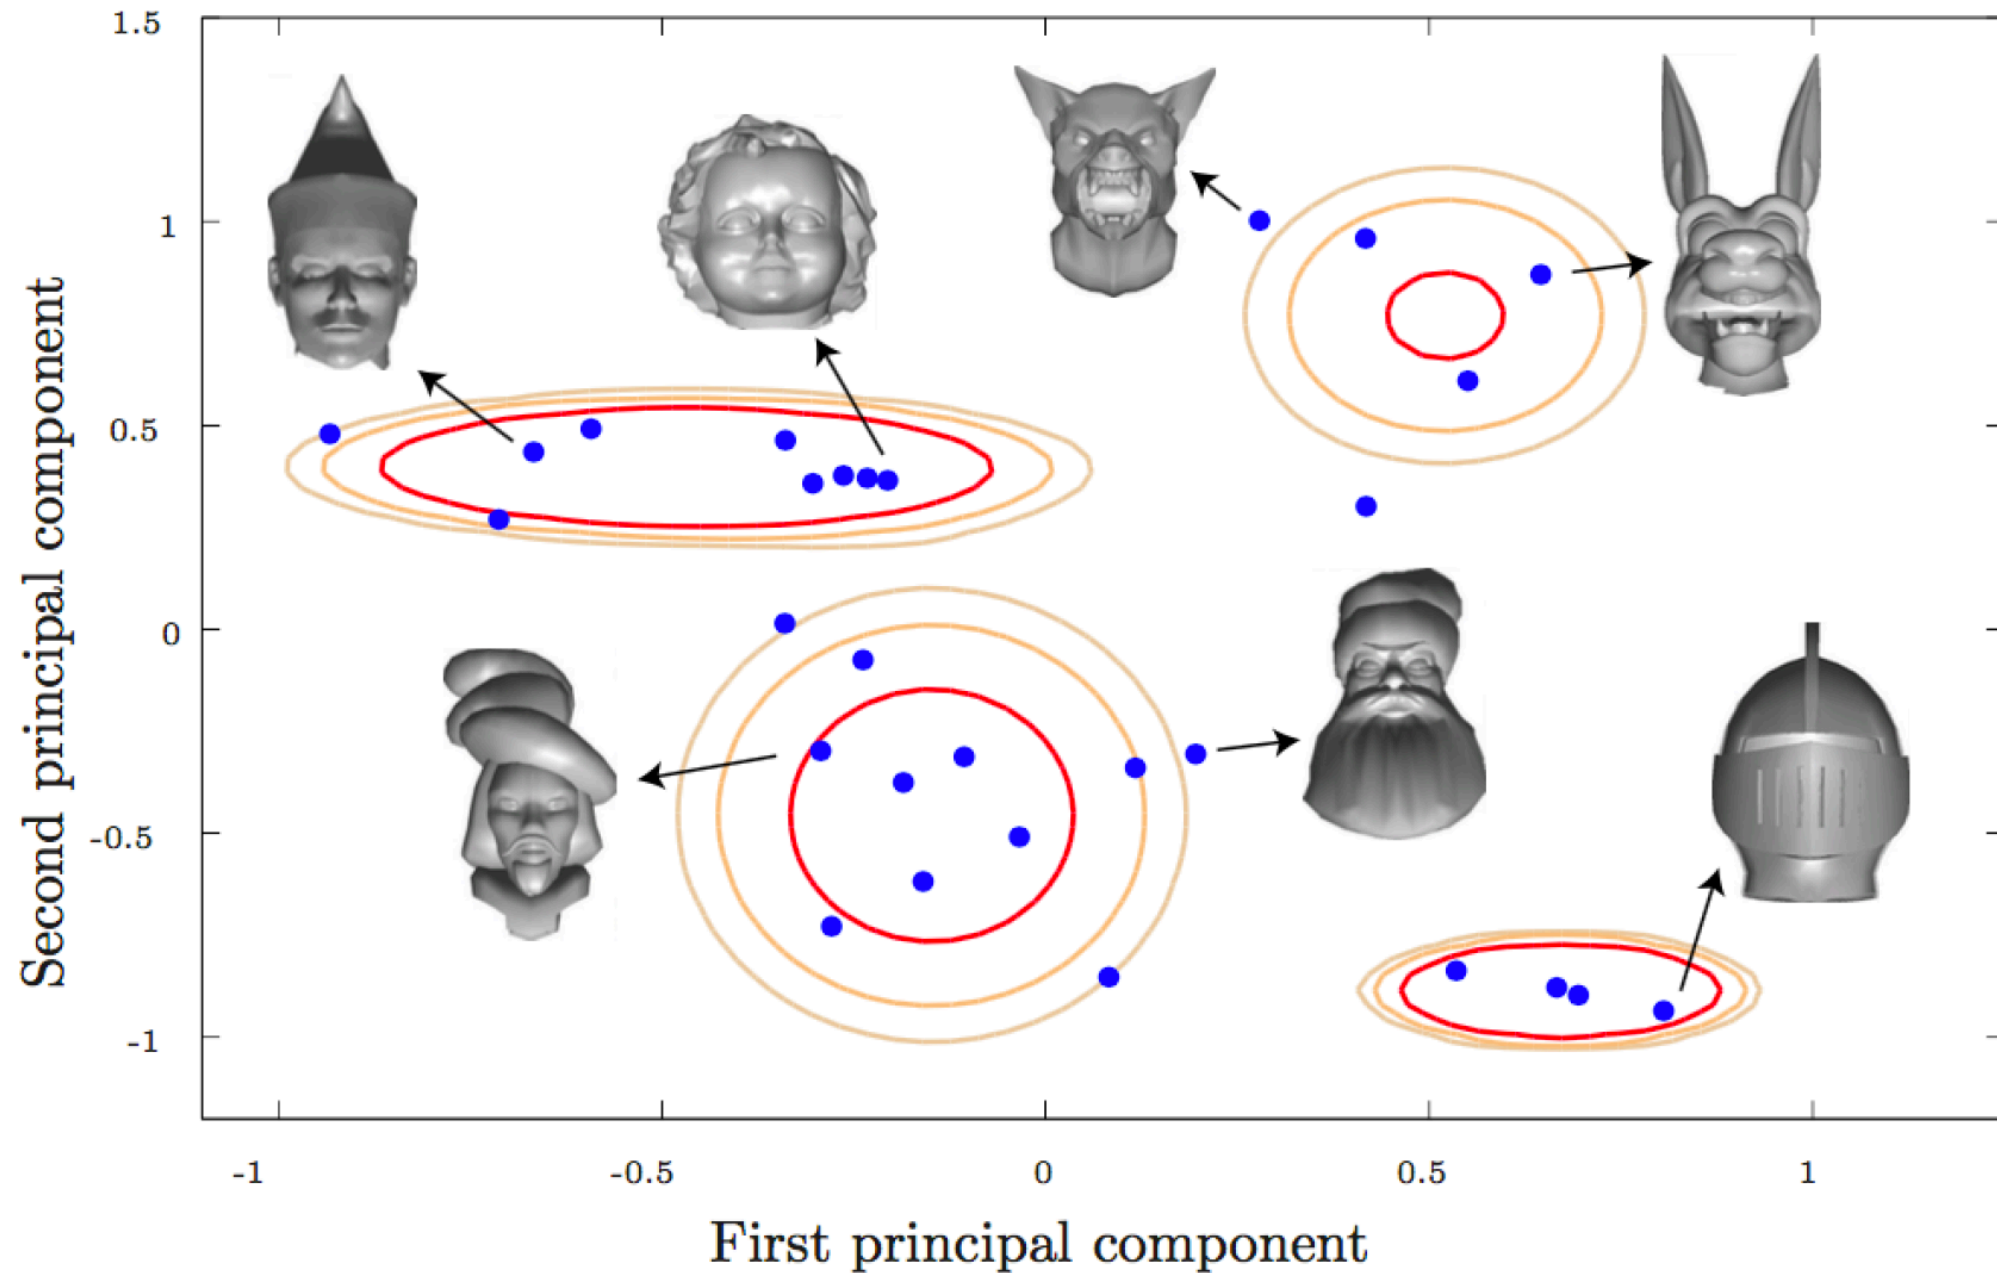

Medial Axis Transform

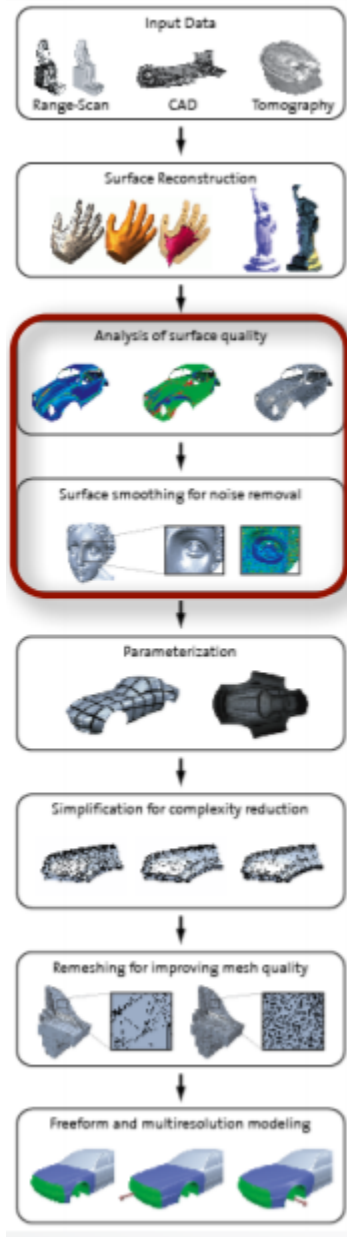

Spectral Decomposition

Global Shape Features

Geometry Processing Pipeline

Geometry Processing Pipeline

Surface smoothing for noise removal

Parameterization

Geometry Processing Pipeline

Parameterization

Simplification for complexity reduction

(a)

(b)

Geometry Processing Pipeline

Simplification for complexity reduction

Remeshing for improving mesh quality

Geometry Processing Pipeline

Remeshing for improving mesh quality

Freeform and multiresolution modeling

Shape Editing

(a)

(b)

(c)

(d)

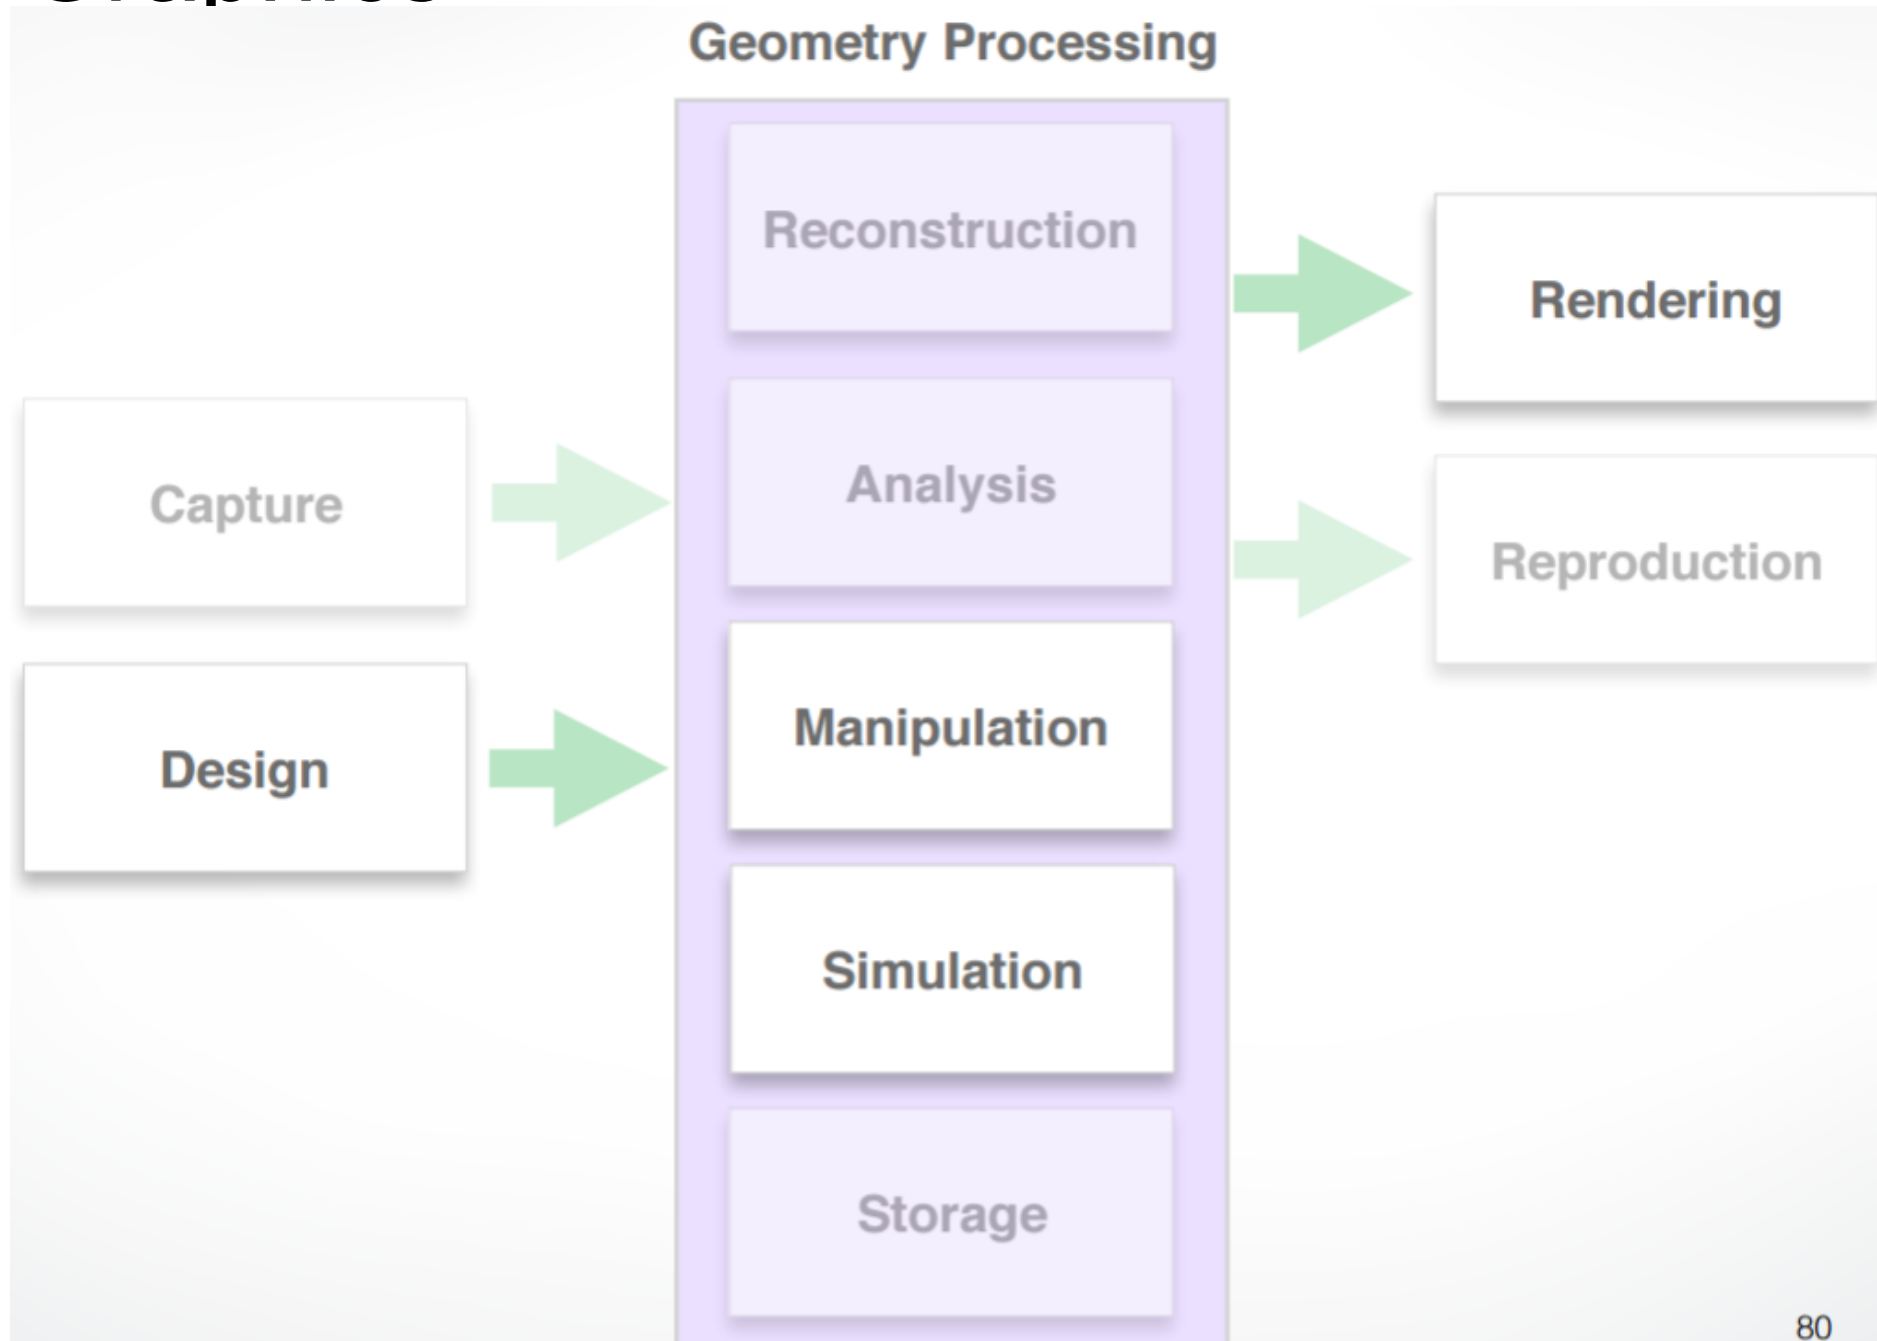

(e)

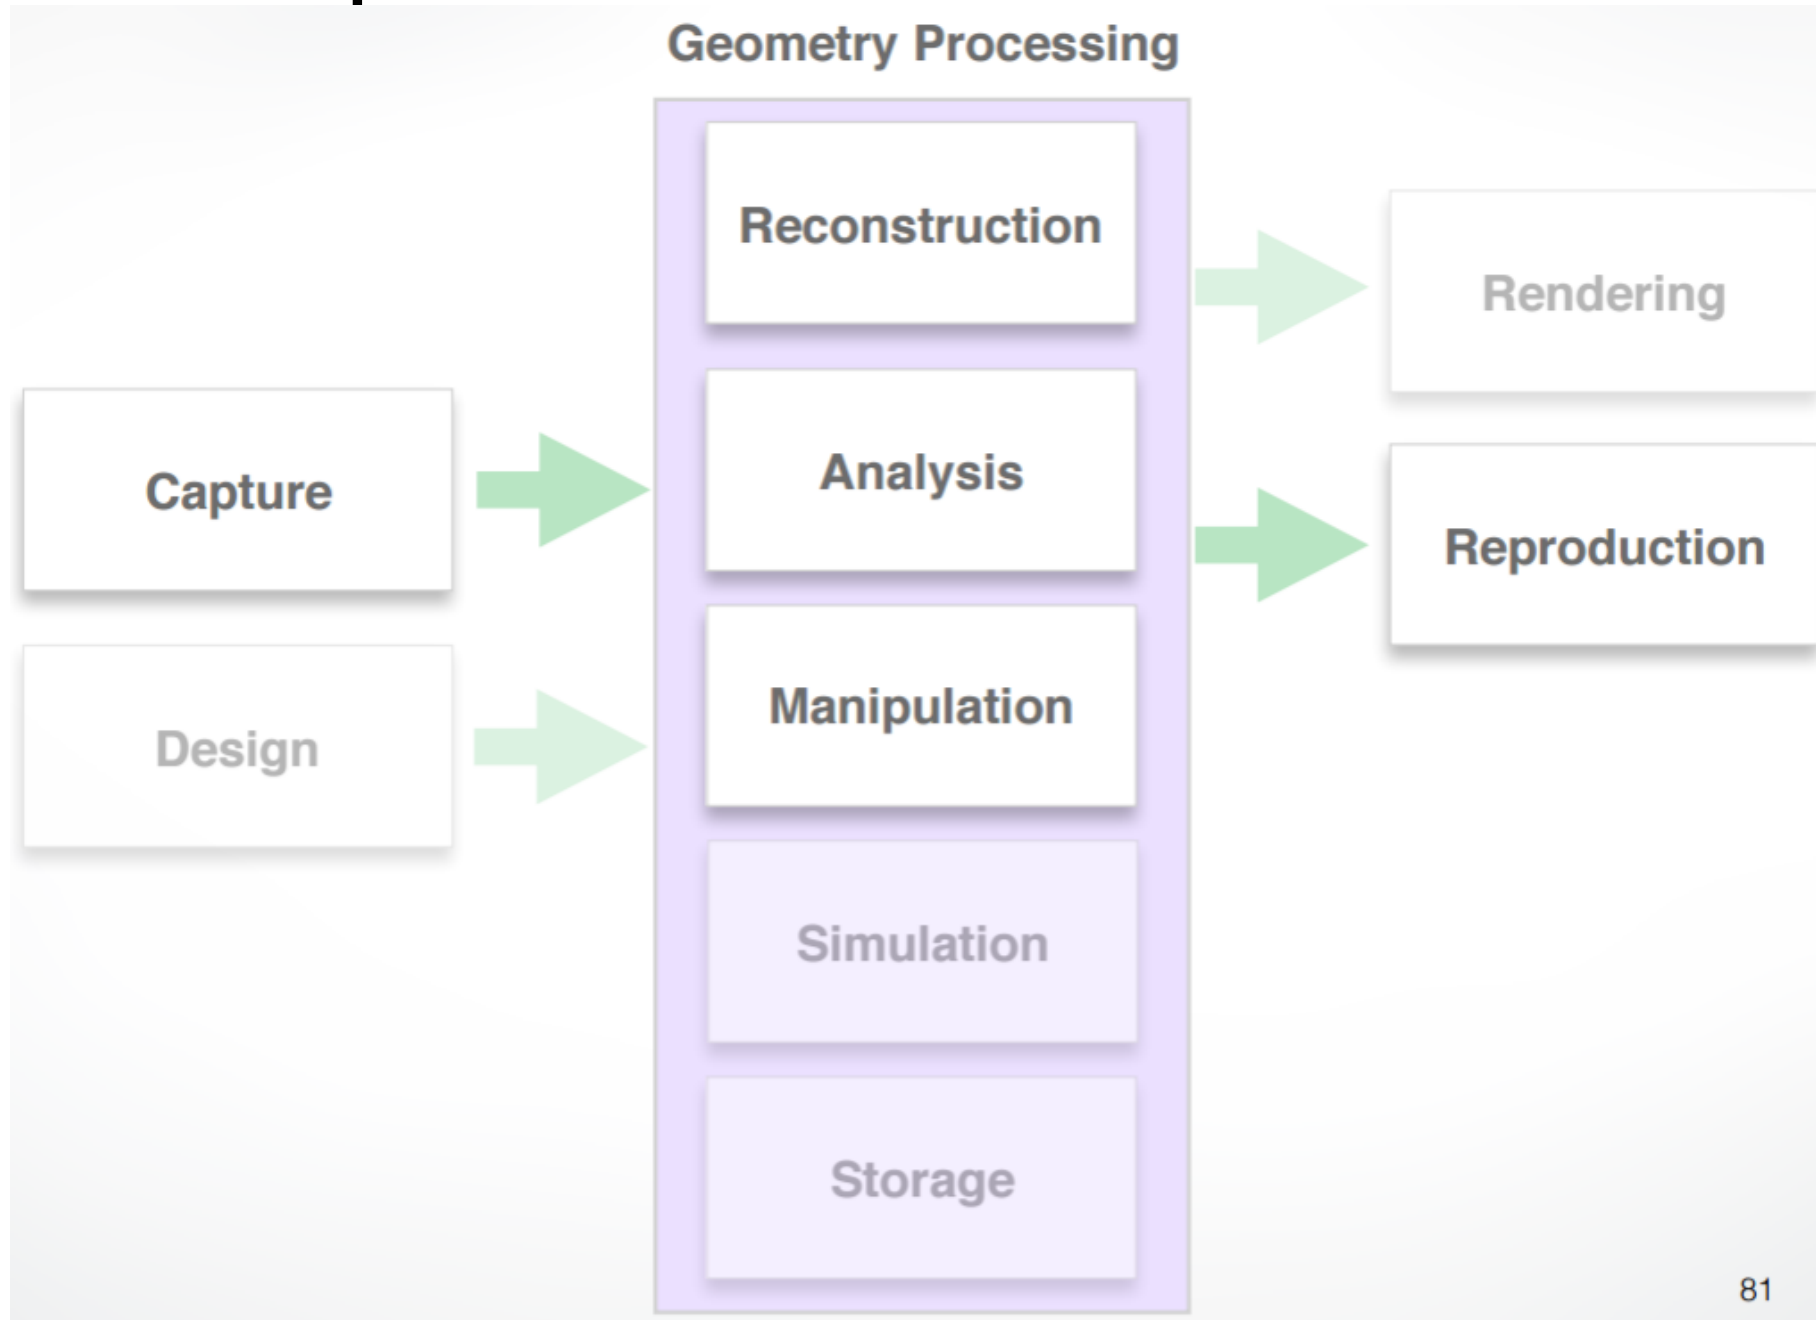

(f)

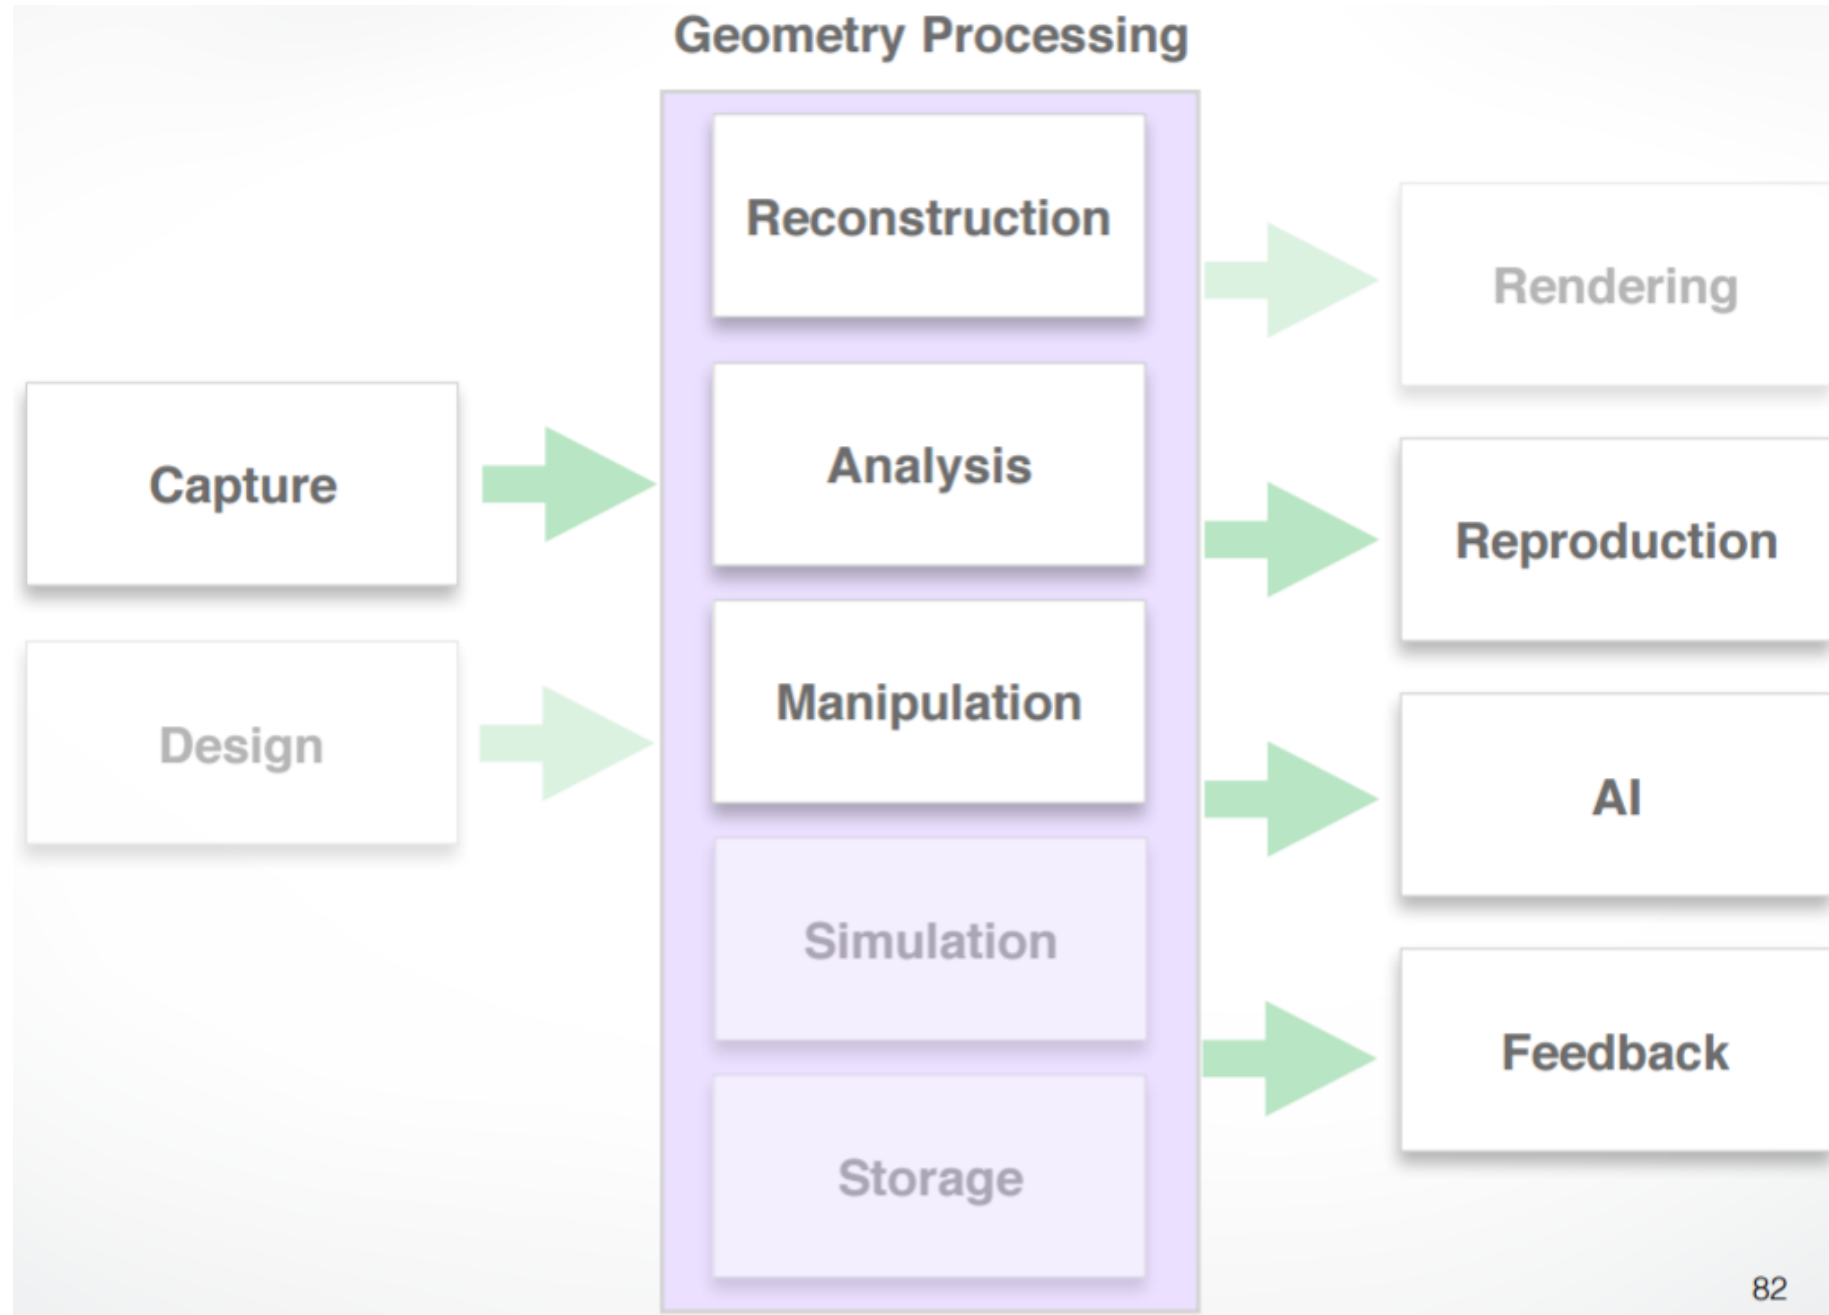

Classic Graphics

Modern Graphics/Vision

The Future: Big Data / Robotics

About the course

Target Audience

- PhD students, MSc students, Advanced undergraduates
- **Computer Science**, Computer Engineering, **Mathematics**, Physics, Game Program, Biomedicine, Bioengineering, etc.
- Computer Graphics, Computer Vision, Robotics, Machine Learning, Signal and Image Processing, Medical Imaging

Prerequisites

- Differential Geometry
- Linear algebra: transformations, spectral decomposition, PCA, SVD
- Graph theory
- ...

- **Combined with a lot of intuition ...**
- **Work on real data = Write/use a lot of code!**

Prerequisites

- Familiarity with a graphics API (e.g. OpenGL)
 - If not, learn quickly (for the sake of visualization)
 - <http://jjcao.github.io/ComputerGraphics/>
- C++/Matlab coding skills
 - If Java is preferred, you will be on your own
- Capability to search Google and forums for useful information

Coding

Coding is very import in this area!

**If you can not program, you will
study nothing in this subject!**

Recommended Textbooks

- Botsch, Kobbelt, Pauly, Alliez, Levy: Polygon Mesh Processing, AK Peters, 2010, <http://www.pmp-book.org/>
- A Sampler of Useful Computational Tools for Applied Geometry, Computer Graphics, and Image Processing, 2015

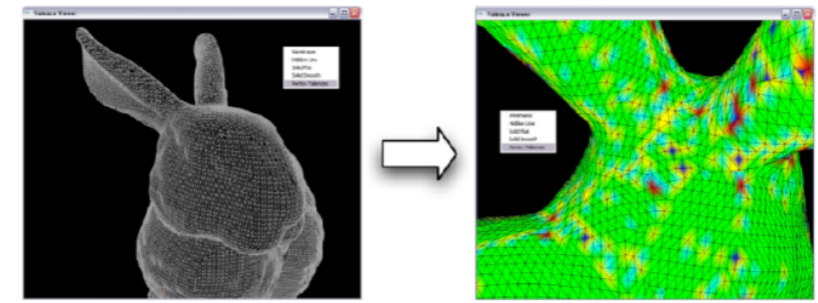

A Sampler of Useful Mathematical Tools for Applied Geometry

Daniel Cohen-Or (editor)
Chen Greif
Tao Ju
Niloy Mitra
Ariel Shamir
Olga Sorkine-Hornung
Hao (Richard) Zhang

Exercises

1. Introduction to **OpenMesh** (display mesh)
2. Registration
3. Implicit Surface Reconstruction
4. Surface Smoothing
5. Mesh Decimation
6. Remeshing

Grading

- Homework
 - **Contribute to 70% of the final grade :**
 - Functions 60 + Document 20 + Compliant code 10 + Executable file 10
 - 2-registration,3-reconstruction,4-smoothing, 5-decimation,6-remeshing
- Oral Reports:
 - 20%
- Class performance
 - 10%
- Two students a team

Document in A4 & electronic:
functions (required + optional)

RF1
Text description;
Code segment for the function
Image illustration;

...

OF1
Text description;
Code segment for the function
Image illustration;

Code in electronic:

- I can open *.sln and build it successfully and without modify setting and anything outside the folder.
- Compress whole folder into a zip
- Run **packing.bat** before compression
- Good function name and proper comments

Exe in electronic:

- A folder with exe, dll, and input data.
- Compress whole folder into a zip.

Oral Reports:

- **20%(Paper)**
 - Problem solved
 - Contribution
 - Pros & cons
 - Core ideas
- **10%(HW)**
 - Show results (run software > show video > show pictures)
 - Report pipeline, main algorithms, main theory behind

Course Objectives

- **Basic concepts**, for polygon mesh processing
- **Basic coding training: Design and implement** individual components of geometric modeling system
- **Apply** the proposed methods in your own work

Video demos
